NEWMARKET FIRST SPRING MEETING.
TUESDAY, APRIL 23.

THE TWO THOUSAND STAKE, by subscription of 100 sovereigns each, 8 ft.; for three-year-olds; colts & 10 lb; fillies & 6 lb; the owner of the second to save colts; Rowley Mile, 1 mile 17 yards. 93 subs.

Duke of Bedford's Vanban, by Muscovite—Palm, set 10 lb (Furdham)
Captain Machel's Knight of the Garter, by the Prince of Wales's—Blossom Bonbon, by Muscovite—Palm, set 10 lb (Furdham)
Mr. Merry's Markhamas, by Danvers—Jude, set 10 lb (Furdham)
Duke of Newcastle's Julius, by St. Albans—Julie, set 10 lb (A. Edwards)

The competitors reached the starting-post a few minutes before 3 o'clock, the time appointed for the race. After a couple of breaks away a beautiful start was effected, the hot stretching across the course in a perfect line; but they were quickly settled in their places without any further excitement. The Duke of Bedford's Vanban, to serve his stable companion, Vanban, rushed to the front, while Perciale, entrusted with a similar mission

the front, while Pericles, entrusted with a slogan for Julius, drew away from the general body of

[illegible]

pounders firing the several charges of 8 lb. for

powders firing the several charges of 3 lb. for range and accuracy with very good result, and on Tuesday the firing was continued with double charges, and fifty rounds were discharged, with 16 lb. of powder per round. The guns worked well, being mounted on slides, and to sign of defect of any kind was elicited by the trial. The weapons were fired with the 7-inch Boker shrapnel. This shell contains about 450 bullets of iron, and is in itself a small loaded cannon. The powder charge is contained in a chamber towards the base of the shell, where the sides of the shell are thick, the bullets are packed into the cylindrical portion of the shell, and a tapered head of thin wrought iron is then attached. The fuse, which also is of Colonel Boker's pattern, is lighted by the action of the gun, and communicates through a long tube with the powder in the rear. Wooden targets, representing a column of infantry were set up at a distance of 1200 yards upon the sands, and the fuses were arranged to burst the shells about fifty or one hundred yards in front of them. The experiments were completely successful, as the shells burst at the proper time, and showered their contents through the targets. When the firing had terminated the targets were examined, and found to be riddled in all directions by the bullets. These shells are certainly the most terrible missiles yet devised for firing at troops in column or at crowded hosts attempting to effect a landing. The successful results of Major Fallaise's system induced General Leifroy some time since to recommend the War Department to apply it to the conversion of our present useless stock of ox-bow guns. A short time since a 64-pounder Essex wrought-iron gun sent Fallaise's shell off through the warrior target with only 12 lb. of powder.

VISIT OF HIS EXCELLENCY AND THE
MAYOR OF SYDNEY TO THE BOTANY
AND LACHLAN SWAMPS.

The Register reports as follows:—
 Flour—One hundred tons have been sold in barrels at 11s 6d per ton. Wheat—A large parcel and some smaller lots have been landed. General Merchandise—To-day the market has been rather more brisk than most days, and business has proceeded rather more briskly than on most days. The prices for salt have been made, and though we have not yet had any positive sales, we have no doubt they will lead to business. There is a firmness in the market for tea, counter and light hardware.

REVIEW.

(From the *Athenaeum*.)
The American Conflict: a History of the Great Rebellion of the United States of America, 1860-65.
 By Horace Greeley. Vol. II. (Hartford, Case and Co.; London, Stevens, Brothers.)

Mr. Horace Greeley, as chief writer (some persons believe the chief thinker also) of the Republican party in the United States, has a very good right to be heard on both sides of the Atlantic, when he undertakes to tell the story of a conflict which has helped to conduct it when it had been opened. He also helped to terminate it. From first to last he stood in the centre of events; first among the men who prompted, next among the men who executed the national will. No voice was heard through the din of arms more frequently than his; and more than once, in very critical and exciting moments, his power to stay, or to extend the war, appeared to be almost equal to that of President Lincoln and General Grant. After the second campaign, if not earlier in the day, the conflict came to be regarded by the leading men of North and South as a war for the crowning of his ideas; for a few few men, even, backed by a small but eloquent and active following in the republican party, had been struggling through many weary years against public apathy and private malice. Mr. Greeley had held the pen of that bright minority of thinkers and orators. On many occasions he had been their champion, on all their representative. Abuse had followed his footsteps. Calumny had struck his fangs into his flesh. Caricature had dogged him. For many years he had been the best abused man in New York. But his enemies only helped to do his work—to make known his ideas, to render popular his name, and all that his name stood for. At length his day had come: events became his servants; and he saw his platform carried forward on half-a-million bayonets. If any individual had a right to enjoy a personal triumph in the close of that war, Mr. Greeley had certainly such a right.

But then, the very closeness of his personal connection with the men and the ideas which the conflict brought into the fore-front of observation, implies some limit to his faculty of storytelling. Mr. Greeley is beyond all things a patriot; but then he is also, by no fault of his own, a partisan. He has taken up one side, and bound himself to defend it through right and wrong. Hence, he stands in the position of a man who has been compromised by events. The tale which he has to tell is in some measure his own. In criticising the faults of cabinets and generals, he is dealing with matters of controversy in which he took a leading part as agent and advocate. Under such an aspect of things, a judgment free from passion is not to be expected, hardly to be desired. Other merits of an historian he may have; but not impartiality. His work is a history of the war from the victor's point of view; such as the world is commonly content to receive of all accomplished facts. It is an old moral. Woe to the vanquished! The conqueror has his way, not only on the field of battle, but on the historian's page.

Mr. Greeley is warm, loyal, patriotic; he breathes the spirit of the North; and his narrative has on its pages that glow of recent victory which every one finds just now in the New England cities. Men have been exalted by their recent strife; have become proud with a rich consciousness of power. The sentiment of greatness is upon them; and it is in the spirit of the new life now flushing in their veins that Mr. Greeley addresses to his countrymen this large and powerful summary of their strife. Cyne will sneer at its fervour; critics will dispute its facts; and philosophers will repudiate some of its conclusions; but in the mean time, a hundred and thirty thousand purchasers have placed it on their tables, and probably a million of readers have made themselves masters of its contents. What nobler guerdon can a writer wish?

The extent of the American field of conflict, with the multitude of details which perpetually crowd the imagination, is a field of view, ready to any thing approaching to a summary of Mr. Greeley's work out of question. It is itself the summary of a thousand State papers, cleverly condensed. One point, perhaps, stands out from the mass with a peculiar distinctness. Perhaps the most exciting news which came to Europe during the war (we do not include the assassination of President Lincoln) was that of the fight in Hampton Roads, between the Merrimac, with her tiny consort, and the United States fleet of wooden vessels, ending in the extraordinary naval duel between the Merrimac and the Monitor. Mr. Greeley regards this affair with patriotic anguish. Of the Merrimac he gives an excellent account:—

"Of our naval officers' most calamitous, cowardly, disgraceful desertion of duty and flight from the Norfolk Navy Yard and Arsenal at the beginning of the struggle, the revolting particulars have already been given. Among the vessels there abandoned to the rebels, after being fired, was the first-class 40-gun steam-frigate Merrimac, which, by Captain M'Call's orders, had been scuttled and partly sunk, so that only one ring and upper works were left; her hull being saved by a speedy submergence. Having thus fallen an easy prey to the rebels, she was adopted by them as the basis of an iron-clad, where Lieutenant John M. Brooke furnished the original plan, which Chief Engineer Williamson, Naval Constructor Porter, together with Lieutenant Brooke, ultimately fashioned into the terrible engine of destruction known to us as the Merrimac, but designated by her rebuilders the Virginia. Messrs. Brooke, Williamson, and Porter were all graduates from our navy, as was Commodore Franklin Buchanan who became her commander. In preparing her for her new service, the hull of the Merrimac was cut down nearly to the water's edge, after which she had been planked over with a raised keel, when a sloping roof of heavy timber strongly and thoroughly plated with railroad iron, rose from two feet below the water-line to about ten feet above it; the ends and sides being alike and thoroughly shielded. A light bulkhead, or false bow, was added, designed to divide the water, and serve as a tank to regulate the vessel's draft; and beyond this projected a strong iron beak. Being thus rendered thoroughly safe proof, she was armed with ten heavy and most effective guns, and so, having been largely refitted from the spoils of the deserted Navy Yard, became at once the cheapest and most formidable navy engine of destruction that the world had ever seen. Whether she had or had not the ability to live in an open, turbulent sea, was left undecided by her brief but memorable career."

Such was the vessel which has caused the reconstruction of all our European navies. Her first victim was the Cumberland:—

"A little before noon, on Saturday, March 8th, a strange craft was descried from our vessels off Newport News, coming down the Elizabeth River from Norfolk, past Craney Island, attended by two remarkable steam gunboats. Two other Rebel gunboats, which had, evidently by preconcert, dropped down the James from Richmond, had been discovered at anchor off Smithfield Point, some twelve miles distant. The non-descript ship, which gradually approached our war-ships awaiting her, and passing across the bow of the Congress frigate, bore down on the Cumberland, with full force under her starboard fore-channel, at the same moment delivering a most destructive fire; while her bow had penetrated a chasm in the bow of the Cumberland

that her forward magazine was drowned in thirty minutes. Still her fire was kept up until, at 6 p.m., the water had risen to the main hatchway, and the ship, unable to port; when, giving a parting fire, Lieutenant Morris ordered every man to jump overboard and save himself if possible. The dead and sick, and severely wounded were unavailingly left in her bay, and on her decks, to the number of at least 100, who sank to the bottom in 44 feet water, with her flag still flying from her topmast."

Next came the turn of the Congress:—

"Seeing the fate of the Cumberland, she set her job and tapers, and, with the assistance of the gunboat Zouave, ran around not far from our batteries at Newport News, where she was soon again assailed by the Merrimac, which, taking the Congress about 100 yards from her stern, raked her fore and aft with shell, while one of the smaller steamers from Norfolk kept up a fire on her starboard quarter; while the Patrick Henry and Thomas Jefferson—Rebel steamers from up the James—likewise poured in their broadsides with precision and effect. The hapless Congress could only reply from her two stern guns, whereof one was soon dismounted and the other had its muzzle knocked off. Her commander, Lieutenant Joseph B. Smith, Acting-Master Thomas Moore, and Pilot William Rhodes, with nearly half her crew, having been killed or wounded, she was on fire in several places, without a gun that could be brought to bear on her destroyer. Lieutenant Pendergast, on whom the command had devolved, at 4.30 p.m. hauled down her flag. She was soon boarded by an officer from the Merrimac, who took her in charge, but left shortly afterwards; when a small Rebel tug came alongside and demanded that her crew should get out of the ship, as her captors intended to burn her immediately. But our soldiers on shore who had not surrendered, who the Merrimac had now a rebel vessel, opened so brisk a fire upon her that she and her crew suddenly departed; when the Merrimac again opened on the luckless craft, though she had a white flag flying to intimate her surrender. Having fired a few shots, the Merrimac left her to engage the Minnesota, giving opportunity for her crew to escape to the shore in small boats, with their wounded. About dark, the Merrimac returned and poured hot shot into the deserted hull, until she was set on fire and utterly destroyed, her guns going off as they became heated—a shell from one of them striking a sloop at anchor at Newport News, and blowing her up. At midnight, the fire reached her magazine, containing five tons of powder, and of a blow up with a tremendous explosion. Of her crew of 434 men, 218 answered to their names at roll-call at Newport News next morning."

The news of these terrible encounters flew to Washington, and thence to New York. It seemed as though nothing human could prevent the total destruction of the American fleet; and then what would become of the seaboard cities? The Merrimac was confidently expected in the bay of New York. It is doubted whether the forts in the famous Narrows could have kept the iron-clad out of the bay; and it was certain that if she could pass the two forts, the city and shipping of New York would have been in her power. The sun went down that night on thousands of anxious hearts. But relief was near:—

"At 10 p.m. the new iron-clad, Monitor, 2 guns, Lieutenant John L. Worden, reached Fortress Monroe on her trial trip from New York, and was immediately dispatched to the aid of the Minnesota, reporting to Captain W. A. R. at 2 a.m. Though the night beside the Merrimac, and an entire sovereignty for either land or water—a cheese-box on a raft—the previous day's sore experience of the night and invulnerability of iron-clads insured her a hearty welcome. Never had there been a more signal example of the value of a friend in the hour of need."

The duel which ensued between this unpromising visitor and the iron-clad monster is well described by Mr. Greeley:—

"All hands were called to quarters, and the Minnesota, opening with her stern guns, signalled the Monitor to attack, when the unwanted little cheese-box steamed down upon the Rebel Apollon and laid her on her side, directly between the Minnesota and her assailant. Gun after gun from the Monitor responded to whole broadsides from the Merrimac, seemed to produce no more impression than a hail-storm on a mountain-cliff; until, tired of thus wasting their ammunition, they commenced manoeuvring for the better position. In this, the Monitor, being lighter and far more manœuvrable than her foe, had decidedly the advantage; and the Merrimac, disgusted, renewed her attentions to the Minnesota, discharging broadsides which have sunk an unuplifted ship on the globe, and put a shell from her rifled bow-gun through the Minnesota's side, which tore four of her rooms into one and set her on fire; but the flames were promptly extinguished, and the Monitor's shot pierced the boiler of the tug-boat Dragon, which was made fast to the port side of the Minnesota, to be ready to assist in towing her off; killing or badly wounding seven of her crew and setting her on fire. By this time, the Minnesota was raining iron upon her assailant: at least fifty solid shot from her great guns having struck the Rebel's side without apparent effect. Now the little Monitor, again interposed between the larger combatants, compelling the Merrimac to change her position; in doing which she grounded; and again a broadside was poured upon her at close range from all the guns of the Minnesota that could be brought to bear. The Merrimac was raining iron upon her assailant: at least fifty solid shot from her great guns having struck the Rebel's side without apparent effect. Now the little Monitor, again interposed between the larger combatants, compelling the Merrimac to change her position; in doing which she grounded; and again a broadside was poured upon her at close range from all the guns of the Minnesota that could be brought to bear.
